

Geography Curriculum Intent

Our Geography curriculum develops curious, knowledgeable and responsible learners who understand the dynamic relationships between people, places and environments. Through a carefully sequenced study of physical and human geography, students develop secure knowledge, geographical skills and the confidence to explain the processes that shape our world and the impacts of human activity.

Sustainability is embedded throughout the curriculum, enabling students to explore local, national and global challenges, evaluate evidence and consider solutions for a more sustainable future. Through geographical enquiry, fieldwork and the development of disciplinary vocabulary, students learn to think critically, appreciate diverse perspectives and become informed global citizens.

With high expectations for all learners, Geography develops resilience, empathy and decision-making skills, preparing students to make a positive contribution to society and succeed in an increasingly interconnected world.
